

# CDAC CMCE Exam Experience – May 2026

## My Result

- Score: **125 / 260**
  - Program: CDAC CMCE
  - Focus Areas: Cyber Security, Networking, Linux, DevOps, PKI, Security Concepts
- 

## CDAC CMCE Exam Experience

Recently, I appeared for the CDAC CMCE assessment and scored **125 marks out of 260**. The overall exam tested both conceptual understanding and practical knowledge across multiple cybersecurity and system-related domains.

## Topics Covered in the Exam

The assessment mainly focused on:

- Fundamentals of Computer Networks (FCN)
- Operating Systems & Linux Administration
- Programming Concepts
- Security Concepts
- PKI Basics
- DevOps & CI/CD Concepts
- Compliance and Audit Basics
- Cyber Security Fundamentals

The paper was MCQ-based and required good time management along with strong fundamentals.

---

## My Preparation Strategy

I followed a structured preparation approach:

- Revised institute notes regularly
- Practiced Linux commands daily
- Focused on networking concepts and troubleshooting
- Solved aptitude and logical reasoning questions
- Used ChatGPT for concept explanations, mock questions, and revision support
- Prepared short handwritten notes for quick revision

I realized that consistency matters more than studying everything at once.

---

## What I Learned

This journey improved:

- Problem-solving ability
- Technical fundamentals
- Linux command-line confidence
- Understanding of cybersecurity concepts
- Interview-oriented preparation mindset

The course also helped me understand how theoretical concepts connect with real-world security practices.

---

## Key Takeaways for Future Aspirants

- Build strong basics in networking and operating systems
  - Practice Linux daily
  - Focus on concepts instead of only memorization
  - Revise frequently using short notes
  - Solve MCQs with a timer to improve speed
  - Maintain consistency throughout the course
- 

## Next Goal

Currently focusing on:

- DevSecOps projects
  - Security-focused development practices
  - Interview preparation
  - Real-world cybersecurity implementation
  - Building strong GitHub projects
-
